CodeChum Python Course - CodeChum	December 2022
CompTIA Tech+ - CompTIA	December 2025
CCNA: Introduction to Networks - Cisco	September 2025
Google Cloud Innovator / Developer Program – Google Cloud Skills Boost	March 2026

Endorsement Letter

14 April 2026

Hon. Angelo B. Alonte, MPA
City Mayor
City Government of Biñan
Brgy. Zapote, Biñan City, Laguna

Thru: Ms. Jenny Anne B. Sarmiento
Department Head, CHRDO

Dear Hon. Alonte,

The B.S. in Information Technology program of Mapúa Malayan Colleges Laguna requires their students to undergo Practicum program for a minimum of 486 hours in an academic calendar that will prepare our students to be job-ready after completing their curriculum. This program intends to enable our students to acquire and practice the knowledge and skills expected of a graduate of a B.S. IT program which, in turn, would guarantee continuous supply of IT professionals needed by your company.

We believe that your company can provide the relevant exposure necessary for our students to achieve the intended learning outcomes for the B.S. in Information Technology program. In this regard, I would like to endorse **Mr. Romel Andres S. Tibay** to have his practicum activities in your company as requested.

We thank you for your confidence and trust with us and we look forward to a more meaningful linkage that is mutually beneficial to our students and your company.

With warm regards,

ADOMAR L. ILAO, DIT

BSIT Program Chair

STUDENT TRAINING AGREEMENT AND LIABILITY WAIVER

IMPORTANT INFORMATION

- THIS FORM IS TO BE ACCOMPLISHED AND SUBMITTED BY STUDENT TRAINEE TO THE PRACTICUM ADVISER BEFORE STARTING THE PRACTICUM
- READ AND UNDERSTAND THE PROVISIONS OF THIS AGREEMENT AND WAIVER.
- ENSURE THAT ALL SIGNATORIES SIGN THE FORM.

I, Rommel Andres S. Tibay, and a student of MALAYAN COLLEGES LAGUNA (hereinafter referred to as "MCL"), do hereby voluntarily undergo on-the-job training at City Government of Biñan, hereinafter referred to as the "Host Company", located at BRGY ZAPOTE, Biñan City, Laguna, under the following terms and conditions:

- That the practicum training will commence on _____ and ends on _____ and will have to complete a minimum of 486 hours required for the on-the-job training;
- That I shall observe proper decorum and act professionally at all times and abide by the Company's rules and regulations and comply with those imposed for the training program, otherwise, I shall be excluded from further participation;
- That in the course of my training program, I may have access to information which may be of confidential in nature and proprietary to the Company, for which I may be required to execute a confidentiality and non-disclosure agreement as a prerequisite to my participation in the training program;
- That the time I will spend on the training program in the completion of my on-the-job training requirements will not and should not be interpreted or construed as working hours and should be regarded as non-compensable. Provided that, the Company may, as a unilateral act of liberality or generosity on their part, provide me with meal, travel, transportation allowances, accommodations, etc.;
- That I fully understand that notwithstanding the allowances enumerated in the preceding section which I may receive, there exists no labor-management and/or employer/employee relationship between me and the Company where I will undergo my training;
- That I shall exercise due care and diligence in the tasks assigned to me and personally be made answerable for any and all liabilities for damage to property or injury to third person, which may be occasioned by my intentional or negligent acts during the course of my on-the-job training;
- That I shall likewise hold the Host Company and MCL free and harmless from any and all liability and responsibility for any sickness or injury to myself and third parties and damage to property which I may sustain and/or may occur at any time during the training program, including time spent in traveling to and from any and all premises and locations where I may be required to go to as part of my training program;
- That the Company reserves the right to discontinue my training on reasonable grounds upon written notice to MCL and myself. Additionally, in the event my training program is discontinued for reasons attributable only to myself, I may be made to reimburse the Host Company for any/all the allowances, stipends, etc., which I may have received from them during and prior to the termination of my training program;
- That in addition to my liability under section g and for the pre-termination of my training program provided for under section i hereof, I may be subjected further to disciplinary action in accordance with the school's student manual and/or be a ground for disqualification from graduation;

Signed on this 15 day of April 2026.

TRAINING PLAN

NAME	Tibay Romel Andres S.	COURSE CODE	IT199F
PROGRAM & STUDENT NO.	BSIT - 2022153317	COURSE TITLE	I.T. PRACTICUM

STUDENT OUTCOMES

CO1. Identify, analyze, and design business process solution to the problem faced by the organization.
CO2. Apply the different concepts of systems analysis and design, software engineering, database management, and programming courses in the problem solving process in the organization, and
CO3. Acquire new knowledge and experience while in the organization.

AREAS / PHASES OF TRAINING AND TIME ALLOTMENT

A. Company Orientation / Training Orientation	-	48 hours
B. Software Development	-	342 hours
C. Technical Documentation	-	48 hours
D. Other IT-related training activities	-	48 hours

EVALUATION GUIDELINES & COURSE OUTCOMES

DEMONSTRATION OF SOFT SKILLS (40%)

KEY AREAS

COMMUNICATION SKILLS (20%)

Relate to co-trainees/supervisors terminologies and rules
Recite procedures and instructions needed for the tasks
Identify and describe safety signs and symbols
Ask critical questions related to the tasks
Produce well-written regular and incident reports
Prepares and presents reports using Information and Communication Technology (ICT)

PROFESSIONAL DEPORTMENT (20%)

Observes proper grooming and attire
Reports to work regularly on time and as necessary, even beyond prescribed working hour
Acts according to the job description given by the company
Willing to accept new tasks apart from the usual routine and responsibilities
Delivers quality output on time
Demonstrates respect for different individuals

INITIATIVE (+5%)

Volunteers to perform tasks beyond routine tasks

DEMONSTRATION OF TECHNICAL SKILLS (60%)

KEY AREAS

Software Development SKILLS (X%)

1. Able to deliver bug-free modules on time (10%)
2. Able to integrate and implement new modules (5%)
3. Able to implement good UI/UX principles in the modules (5%)

Technical Documentation SKILLS (Y%)

1. Able to write Project Scheduling document (5%)
2. Able to write Testing Activities Documents (5%)
3. Able to write User's Manual (5%)
4. Able to write Technical Document (5%)

IT Operations SKILLS (Z%)

1. Able to deploy and configure applications in a local/server environment (10%)
2. Able to manage database operations (backup, restore, basic queries) (5%)
3. Able to collaborate using version control and basic team workflows (5%)

INITIATIVE (+5%)

Volunteers to perform tasks beyond routine tasks

DATE	July 14, 2026	AREA ASSIGNMENT	ICTO ? OJT Area / Workstation
TASK	BAC System ? Import Reviewer Hardening &	SHIFT/TIME	8:00 AM ? 5:00 PM

Day 52: BAC System ? Import Reviewer Hardening & UAT Prep

Task Assignment / Movement:

Continued hardening the Import Reviewer and began preparing for user acceptance testing with CSWD staff as the project moves toward its final stages.

New Learning:

Learned how preparing for UAT shifts the focus from writing features to validating that the system meets the real needs of the CSWD encoders who will use it daily.

Accomplishment:

Refined the Import Reviewer's validations and stability, and outlined a UAT plan so CSWD staff can test the import workflow against real family profiling data.

Challenges Faced & Response:

Balancing final feature hardening with preparing usable UAT materials required focus. Managed it by prioritizing the import workflow, which is the most critical to validate.

Observations & Recommendations:

Involving end users through UAT early helps catch usability issues before deployment.

Recommends walking CSWD staff through the import step by step during the first UAT session.

DATE	July 13, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Import Reviewer Fixes & View	SHIFT/TIME	8:00 AM 5:00 PM

Day 51: BAC System Import Reviewer Fixes & Viewer Updates

Task Assignment / Movement:

Continued work on the Import Reviewer fixing bugs uncovered during testing and updating the import viewer to display staged records more clearly.

New Learning:

Learned how iterating on a feature with real test data quickly surfaces edge cases that were not obvious during the initial implementation.

Accomplishment:

Fixed several Import Reviewer bugs and improved the import viewer so encoders can review and interpret staged records more easily before committing them.

Challenges Faced & Response:

Some reviewer bugs only appeared with specific malformed rows from the test datasets. Resolved each by reproducing the exact row, fixing the logic, and re-running the import.

Observations & Recommendations:

Tightening the reviewer against real messy data makes the import far more dependable. Recommends keeping the problematic test rows as permanent regression cases.

DATE	July 10, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Import Reviewer & Staging Ap	SHIFT/TIME	8:00 AM 5:00 PM

Day 50: BAC System Import Reviewer & Staging Approach

Task Assignment / Movement:

Worked on building the Import Reviewer a staged review step that lets encoders inspect and validate imported rows before they are committed to the database.

New Learning:

Learned how staging review rows to a file instead of the database avoids overloading it on very large imports while still letting users review every record before saving.

Accomplishment:

Built the Import Reviewer with additional validations, staging imported rows for review so problem records can be caught and corrected before they reach the live data.

Challenges Faced & Response:

Handling very large review sets without exhausting memory required a careful approach. Resolved by staging review rows to a file rather than loading them all into the database.

Observations & Recommendations:

A review-before-commit step gives encoders confidence and prevents bad bulk imports.

Recommends always previewing large imports so errors are caught before they are saved.

DATE	July 9, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Import Validator Gap Analysis	SHIFT/TIME	8:00 AM 5:00 PM

Day 49: BAC System Import Validator Gap Analysis

Task Assignment / Movement:

Spent the day analyzing the validation gaps found during earlier stress testing and planning the fixes needed before building the import reviewer.

New Learning:

Learned how to prioritize a backlog of validation bugs by the risk each one poses to data integrity, tackling the highest-impact gaps first.

Accomplishment:

Catalogued the outstanding validator gaps cross-batch QR duplicates, head-only scope, float misfiling, and missing civil-status and sector checks into a prioritized fix order.

Challenges Faced & Response:

Some gaps were interconnected, so fixing one carelessly could reintroduce another.

Addressed this by ordering the fixes by dependency rather than by ease of implementation.

Observations & Recommendations:

Documenting each validation gap with a clear reproduction step speeds up the actual fix.

Recommends resolving data-integrity issues in dependency order to avoid regressions.

DATE	July 8, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Session Handling & Branch In	SHIFT/TIME	8:00 AM 5:00 PM

Day 48: BAC System Session Handling & Branch Integration

Task Assignment / Movement:

Worked on session handling and integration excluding the session store from version control and merging the team's latest main branch into my import branch.

New Learning:

Learned why generated runtime files such as the session store should be gitignored to avoid noisy commits and conflicts between team members' local environments.

Accomplishment:

Added the session store to .gitignore and merged the latest main branch changes from teammates into my import branch, keeping the feature branch up to date.

Challenges Faced & Response:

Merging an actively changing main branch into a large feature branch caused conflicts. Resolved them carefully so both the shared changes and my import work were preserved.

Observations & Recommendations:

Keeping runtime files out of version control keeps the repository clean and conflict-free. Recommends syncing feature branches with main regularly to keep merges small and simple.

DATE	July 7, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Login & Session Guard	SHIFT/TIME	8:00 AM 5:00 PM

Day 47: BAC System Login & Session Guard

Task Assignment / Movement:

Focused on my assigned security module . implementing a login guard that prevents the same account from being logged in from more than one session at a time.

New Learning:

Learned how to track active sessions per account and enforce a single active login, improving security and preventing conflicting concurrent edits by the same user.

Accomplishment:

Implemented a login guard that blocks duplicate simultaneous logins for the same account and integrated it cleanly with the existing authentication flow.

Challenges Faced & Response:

Detecting an existing active session without locking out legitimate re-logins was tricky. Resolved by tracking session state so stale sessions could be safely replaced on login.

Observations & Recommendations:

Single-session enforcement reduces the risk of conflicting actions on shared accounts. Recommends clearly informing users when an existing session blocks their new login.

Day 46: BAC System QR Column & Import Validations

Task Assignment / Movement:

Worked on adding a QR column to the Manage Families view and strengthening the import validations, including a guard for unknown sector values.

New Learning:

Learned how associating a QR identifier with each family group supports quick lookup and helps tie physical access cards back to the correct beneficiary record.

Accomplishment:

Added a QR column to Manage Families, introduced validation for unknown sectors, and layered in additional import validations to reject malformed rows.

Challenges Faced & Response:

Unknown or misspelled sector values in imported data could slip past earlier checks.

Resolved by validating each sector against the official list and rejecting unknown ones.

Observations & Recommendations:

Validating against a controlled list keeps imported data consistent with the data model.

Recommends rejecting unknown lookup values rather than silently defaulting them.

DATE	July 3, 2026	AREA ASSIGNMENT	CSWD Tech4Ed Facility / Workstation
TASK	BAC System Large-Scale Import Stress Tes	SHIFT/TIME	8:00 AM 5:00 PM

Day 45: BAC System Large-Scale Import Stress Testing

Task Assignment / Movement:

Deployed at the Tech4Ed facility and ran large-scale import stress tests using synthetic family datasets to expose gaps in the validation before real data is loaded.

New Learning:

Learned how stress-testing an import with tens of thousands of rows reveals performance and validation issues that small sample files never trigger.

Accomplishment:

Ran test imports with large synthetic datasets and injected error batches, cataloguing validation gaps in the cron worker for a prioritized fix list.

Challenges Faced & Response:

Very large imports exposed edge cases such as cross-batch duplicates and field mismatches. Recorded each gap with a reproducible test case to guide the follow-up validation fixes.

Observations & Recommendations:

Testing at realistic data volumes early prevents failures during actual CSWD rollout.

Recommends keeping a reusable synthetic dataset for repeatable import regression tests.

DATE	July 2, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Service Suggestions & Cron V	SHIFT/TIME	8:00 AM 5:00 PM

Day 44: BAC System Service Suggestions & Cron Worker Fix

Task Assignment / Movement:

Worked on adding service and program suggestions to the Add New Family Record form and refining that behavior, along with fixing an issue in the cron worker.

New Learning:

Learned how contextual suggestions guide encoders toward valid services and programs, reducing data-entry errors while keeping the form quick to use.

Accomplishment:

Added service and program suggestions to the Add New Family Record form, refactored the suggestion behavior for clarity, and fixed a bug in the import cron worker.

Challenges Faced & Response:

The initial suggestion display was cluttered and inconsistent with the form's style.

Resolved by refactoring the suggestions and removing unnecessary decorative elements.

Observations & Recommendations:

Guided suggestions improve data quality without slowing down the encoder's workflow.

Recommends basing suggestions on the selected sector so they stay relevant per record.

DATE	July 1, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Import Validation & Lookup Re	SHIFT/TIME	8:00 AM 5:00 PM

Day 43: BAC System Import Validation & Lookup Realignment

Task Assignment / Movement:

Focused on import safety adding duplicate validation and a skip mechanism in the cron worker, an archive guard for services and programs, and realigning lookups to the CSWD form.

New Learning:

Learned how to detect and skip duplicate family records during import so re-running an import does not create conflicting or repeated entries in the database.

Accomplishment:

Added duplicate validation with a skip-record path in the cron worker, guarded archived services and programs, and realigned the sectors, services, and categories to the CSWD form.

Challenges Faced & Response:

Ensuring skipped duplicates were logged clearly rather than silently ignored was key. Resolved by recording each skipped record so encoders can review what was not imported.

Observations & Recommendations:

Duplicate handling makes imports safely repeatable, which is vital for real data entry. Recommends surfacing a summary of skipped rows at the end of every import run.

DATE	June 30, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Cron Worker for Imports	SHIFT/TIME	8:00 AM 5:00 PM

Day 42: BAC System Cron Worker for Imports

Task Assignment / Movement:

Worked on implementing a Cron Worker to process family record imports in the background for current and future use, and fixed handling of the uploaded Excel file.

New Learning:

Learned how offloading heavy imports to a background cron worker keeps the interface responsive and lets large files process without timing out the user's request.

Accomplishment:

Implemented a Cron Worker that processes imports asynchronously and corrected the Excel file handling so uploads are read and queued reliably.

Challenges Faced & Response:

Coordinating the web upload with the background worker introduced timing complexity. Resolved by staging the uploaded file and letting the worker pick it up independently.

Observations & Recommendations:

Background processing is essential for large imports that would otherwise time out. Recommends monitoring the worker's queue so failed or stuck imports are caught early.

DATE	June 29, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Excel Bulk Import/Export	SHIFT/TIME	8:00 AM 5:00 PM

Day 41: BAC System Excel Bulk Import/Export

Task Assignment / Movement:

Focused on the core feature implementing Excel bulk import and export for family records along with validation for adding many family members at once.

New Learning:

Learned how to process bulk Excel data in CodeIgniter 4, reading many rows into validated family records while handling multiple members grouped under one household.

Accomplishment:

Implemented Excel bulk import and export for family records and added validation to correctly handle families with many members during a single import.

Challenges Faced & Response:

Large imports with many members per family risked dropping rows during processing.

Addressed it with stricter validation and member-count checks before saving each family.

Observations & Recommendations:

Bulk import dramatically speeds up onboarding of existing CSWD beneficiary records.

Recommends validating every row up front so partial or malformed imports are prevented.

DATE	June 26, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Library Cleanup & Add-Family	SHIFT/TIME	8:00 AM 5:00 PM

Day 40: BAC System Library Cleanup & Add-Family Design

Task Assignment / Movement:

Worked on cleanup and polish deleting dead code from the libraries and support folders ? and improving the design of the Manage Records Add Family page.

New Learning:

Learned how organizing asset helpers and removing unused library code improves both load performance and the overall clarity of the project structure.

Accomplishment:

Removed dead code from the libraries and app/support folders, organized the asset helpers, refined the Add Family design, and fixed the audit trail views.

Challenges Faced & Response:

Confirming that library code was truly unused before deleting it required care. Resolved by searching for every reference across the project before removing each file.

Observations & Recommendations:

Periodic dead-code removal keeps the project lightweight and easier to reason about. Recommends a project-wide reference search before deleting any shared library file.

DATE	June 25, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Post-Merge Regression Testin	SHIFT/TIME	8:00 AM 5:00 PM

Day 39: BAC System Post-Merge Regression Testing

Task Assignment / Movement:

Spent the day on regression testing after the previous day's UI merge and models refactor, verifying that older functionality still worked alongside the new changes.

New Learning:

Learned how regression testing after a large merge catches features that quietly break even when the merge itself reports no conflicts.

Accomplishment:

Systematically tested the merged UI and refactored models across the main workflows and confirmed that record management, search, and account features all behaved as expected.

Challenges Faced & Response:

A few older features behaved differently after the merge and needed small corrections. Fixed each one and re-tested the related pages to confirm stable behavior.

Observations & Recommendations:

A regression pass after every major merge saves time compared to finding bugs later. Recommends keeping a short list of core workflows to re-test after each integration.

DATE	June 24, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System UI Merge & Models Refactor	SHIFT/TIME	8:00 AM 5:00 PM

Day 38: BAC System UI Merge & Models Refactor

Task Assignment / Movement:

Worked on merging the jade UI branch back into the main development line while restoring older functionality and refactoring the models to centralize shared helpers.

New Learning:

Learned how to merge a UI-focused branch without losing previously working features by carefully reviewing each change before accepting it into the main codebase.

Accomplishment:

Merged the jade branch UI with the existing functionality and refactored the models to remove dead code and centralize shared helper logic in one place.

Challenges Faced & Response:

The merge reintroduced some older code that conflicted with recent refactors. Resolved by reconciling both versions and keeping the cleaner, refactored implementation.

Observations & Recommendations:

Reviewing merges change by change prevents silently overwriting recent improvements. Recommends a quick post-merge smoke test to confirm no functionality was lost.

DATE	June 23, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Shared Helpers & Developer A	SHIFT/TIME	8:00 AM 5:00 PM

Day 37: BAC System Shared Helpers & Developer Account

Task Assignment / Movement:

Focused on refactoring for clarity extracting shared lookup and session helpers, moving developer credentials to writable seeded from .env, and adding asset helpers.

New Learning:

Learned how extracting repeated logic into shared helper functions reduces duplication and keeps controllers and views focused on their own responsibilities.

Accomplishment:

Extracted shared lookup and session helpers, dropped model calls from views, added an editable My Account profile for the .env developer, and built asset_helper functionality.

Challenges Faced & Response:

Removing model calls from views without breaking data display required careful tracing. Resolved by routing that data through controllers and helpers before the view renders.

Observations & Recommendations:

Centralizing shared logic in helpers makes the codebase cleaner and easier to maintain. Recommends keeping views free of direct model access to preserve separation of concerns.

DATE	June 22, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Excel Import Design & PhpSpr	SHIFT/TIME	8:00 AM 5:00 PM

Day 36: BAC System Excel Import Design & PhpSpreadsheet Study

Task Assignment / Movement:

Worked on designing the family records bulk import studying the PhpSpreadsheet library and structuring the Excel template with Families, Reference, and Example sheets.

New Learning:

Learned how the PhpSpreadsheet library reads and writes Excel files in CodeIgniter 4, and how a Reference sheet of dropdown codes keeps bulk data entry consistent.

Accomplishment:

Drafted the import template layout with separate Families, Reference, and Example sheets, and outlined the validation rules needed before records reach the database.

Challenges Faced & Response:

Designing a template that non-technical CSWD staff could fill correctly was tricky.

Addressed it by adding an Example sheet and dropdown codes to guide correct entry.

Observations & Recommendations:

A well-structured template reduces import errors before validation ever runs.

Recommends shipping the template with clear examples so encoders format data correctly.

DATE	June 19, 2026	AREA ASSIGNMENT	CSWD Tech4Ed Facility / Workstation
TASK	BAC System Import Planning & CSWD Form	SHIFT/TIME	8:00 AM 5:00 PM

Day 35: BAC System Import Planning & CSWD Form Alignment

Task Assignment / Movement:

Deployed at the Tech4Ed facility and used the day to plan the upcoming bulk import feature, reviewing the CSWD family profiling form to align the system's data fields.

New Learning:

Learned how important it is to match the system's sectors, services, and categories to the official CSWD form so imported records map cleanly to real-world documents.

Accomplishment:

Mapped the CSWD family profiling form against the current lookup tables and drafted the column structure needed for the planned Excel bulk import feature.

Challenges Faced & Response:

Some system lookup values did not directly correspond to the official CSWD form labels. Noted each mismatch for a later refactor to realign the lookups with the CSWD form.

Observations & Recommendations:

Aligning data models to the source document early prevents costly rework during import. Recommends treating the official CSWD form as the single source of truth for fields.

DATE	June 18, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Role-Access Testing & QA	SHIFT/TIME	8:00 AM 5:00 PM

Day 34: BAC System Role-Access Testing & QA

Task Assignment / Movement:

Spent the day testing and QA on the account management and audit features completed earlier in the week, focusing on role-based access for admin, encoder, and viewer.

New Learning:

Learned the importance of testing each permission level separately, since a change to one role's access can unintentionally expose or restrict actions for another role.

Accomplishment:

Verified role-based access across all three account levels, confirmed the audit trail captures each mutation, and validated the archive and restore confirmation flows.

Challenges Faced & Response:

Some edge cases only appeared when switching quickly between different account roles. Documented each case and re-tested after adjusting the affected permission guards.

Observations & Recommendations:

Structured manual testing per role surfaces access bugs that unit tests can miss. Recommends maintaining a simple role-access test checklist for every release.

DATE	June 17, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Account Management Modals	SHIFT/TIME	8:00 AM 5:00 PM

Day 33: BAC System Account Management Modals & Audit Polish

Task Assignment / Movement:

Worked on account management adding confirmation modals for enabling and disabling accounts and polished the audit trail views, filters, and default record filtering.

New Learning:

Learned how consistent, styled confirmation modals reduce accidental destructive actions and give users clearer feedback than plain browser confirm dialogs.

Accomplishment:

Added enable/disable and archive/restore confirmation modals, set Manage Records to default to active, fixed the barangay filter, and added a search filter for audit logs.

Challenges Faced & Response:

The archive and restore confirmations were duplicated across several views.

Resolved by de-duplicating them into a single reusable, styled modal component.

Observations & Recommendations:

Reusable modal components keep confirmation behavior uniform across the whole system.

Recommends routing all irreversible actions through a shared confirmation pattern.

DATE	June 16, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Audit Trail Coverage & Accour	SHIFT/TIME	8:00 AM 5:00 PM

Day 32: BAC System Audit Trail Coverage & Account Controls

Task Assignment / Movement:

Focused on expanding the audit trail adding a full_description narrative to each log entry and extending the account controls while unifying the dashboard UI.

New Learning:

Learned how to design human-readable audit narratives that record not just what field changed but the meaningful context of each action for accountability and traceability.

Accomplishment:

Added full_description narratives and broadened audit coverage across more actions, and extended account controls while unifying the dashboard into a consistent layout.

Challenges Faced & Response:

Generating clear narrative descriptions for varied actions required a flexible approach. Resolved by building a helper that composes descriptions from the action and its data.

Observations & Recommendations:

Descriptive audit logs make compliance reviews far faster than raw field-change dumps. Recommends auditing every data mutation so no beneficiary change goes unrecorded.

DATE	June 15, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System My Account Editor & Lookups	SHIFT/TIME	8:00 AM 5:00 PM

Day 31: BAC System My Account Editor & Lookups Filtering

Task Assignment / Movement:

Worked on the My Account module building an editor for administrator, encoder, and viewer roles ? and improving filtering on the Sector, Services, and Categories pages.

New Learning:

Learned how to implement a 'retire-but-grandfather' archiving pattern so lookup values can be deactivated for new use while remaining valid on existing historical records.

Accomplishment:

Delivered the My Account editor across all three roles, fixed account login on the RoleAccess UserModel, and added live 'type to filter' search with an All-status filter.

Challenges Faced & Response:

Making the filter box actually filter rows live while matching the existing search UI took several iterations. Resolved by reusing the Manage Records search-bar design.

Observations & Recommendations:

Grandfathering archived lookups protects data integrity without deleting past records.

Recommends applying the same archive-instead-of-delete rule across all lookup tables.

DATE	June 12, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Codebase Cleanup, Refactorir	SHIFT/TIME	8:00 AM 5:00 PM

Day 30: BAC System Codebase Cleanup, Refactoring & Testing

Task Assignment / Movement:

Dedicated the day to consolidating the week's work organizing folders, renaming files for clarity, and testing the search and Add Record features built earlier in the week.

New Learning:

Learned how a well-organized folder structure and consistent naming make a growing CodeIgniter 4 codebase easier to navigate and reduce onboarding time for teammates.

Accomplishment:

Reorganized project folders, removed remaining dead code, and verified that the live search, dropdown, and null-field fixes all worked correctly through manual testing.

Challenges Faced & Response:

Refactoring file locations risked breaking include paths and controller references.

Resolved by updating affected paths and re-running each feature to confirm stability.

Observations & Recommendations:

Setting aside dedicated cleanup time keeps technical debt from accumulating unnoticed.

Recommends scheduling a short refactor-and-test block at the end of each work week.

TRAINEE'S SIGNATURE

DATE	June 11, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Accounts Refactor & Database	SHIFT/TIME	8:00 AM 5:00 PM

Day 29: BAC System Accounts Refactor & Database Cleanup

Task Assignment / Movement:

Worked on refactoring the accounts structure adding personal details, renaming the role field to account_level, and moving the developer account into the .env file.

New Learning:

Learned the value of storing sensitive developer credentials in environment variables rather than the database, improving security and separating config from application data.

Accomplishment:

Refactored the accounts schema and removed the obsolete is_official logic, and began restructuring sector categories while cleaning unused category data from the database.

Challenges Faced & Response:

Renaming the role column to account_level risked breaking role-based access checks. Resolved by tracing every reference to the old field and updating them before migrating.

Observations & Recommendations:

Keeping configuration out of the database makes deployments safer and more portable.

Recommends documenting each schema change so the whole team stays aligned on the model.

DATE	June 10, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System View Sizing Fix & CSS Cleanu	SHIFT/TIME	8:00 AM 5:00 PM

Day 28: BAC System View Sizing Fix & CSS Cleanup

Task Assignment / Movement:

Focused on front-end polish for the BAC System correcting the Add Record view sizing and removing orphaned and dead CSS accumulated during earlier UI iterations.

New Learning:

Learned how leftover and unused CSS rules can cause layout inconsistencies, and how to audit stylesheets to safely remove dead code without breaking existing components.

Accomplishment:

Fixed the Add Record modal sizing so the view displays correctly, and cleaned out orphaned CSS rules to keep the stylesheet lean and maintainable.

Challenges Faced & Response:

Identifying which CSS rules were truly unused was difficult given the shared classes.

Resolved by testing each affected page after removal to confirm nothing regressed.

Observations & Recommendations:

Regular CSS cleanup prevents style bloat and makes future UI changes far easier.

Recommends adopting a consistent class-naming convention to avoid orphaned styles.

DATE	June 9, 2026	AREA ASSIGNMENT	ICTO OJT Area / Workstation
TASK	BAC System Dashboard Search & Input Filt	SHIFT/TIME	8:00 AM 5:00 PM

Day 27: BAC System Dashboard Search & Input Filtering

Task Assignment / Movement:

Worked on extending live search to the dashboard's recent records and hardening the

Add Record form against invalid input containing special characters.

New Learning:

Learned how client-side filtering paired with server-side validation improves both the responsiveness and the security of search-driven interfaces.

Accomplishment:

Added 'search all' functionality to the dashboard recent-records bar and implemented an input filter that blocks unsafe special characters when adding a new record.

Challenges Faced & Response:

Balancing a permissive search with strict input filtering required careful rule design.

Resolved it by whitelisting allowed characters instead of trying to block every bad one.

Observations & Recommendations:

A shared search component across dashboard and records pages reduces duplicated logic.

Recommends centralizing input-filter rules so validation stays consistent system-wide.

TASK	BAC System Manage Records Search & Add	SHIFT/TIME	8:00 AM 5:00 PM

Day 26: BAC System Manage Records Search & Add Record Fixes

Task Assignment / Movement:

Continued full-day development on the BAC System, focusing on the Manage Records database search and improvements to the Add Record form's dropdown inputs.

New Learning:

Learned how to build a server-side searchable dropdown and sanitize record inputs so special characters no longer break form submission or the underlying SQL queries.

Accomplishment:

Implemented database search for Manage Records, added a searchable dropdown to Add Record, and fixed civil status, suffix, and address fields that were showing as null.

Challenges Faced & Response:

The barangay data flowed through several models and controllers, causing null values. Traced the data path and corrected the family view models to map the fields correctly.

Observations & Recommendations:

Validating and sanitizing inputs at the form level prevents many downstream data bugs.

Recommends standardizing dropdown components so all record forms behave consistently.

TASK	BAC System Branch Integration & UI Merge	SHIFT/TIME	8:00 AM 5:00 PM

Day 25: BAC System Branch Integration & UI Merge

Task Assignment / Movement:

Reported to the ICTO office and worked on integrating the team's UI branch into my development branch, setting up a combined melbranch-jade-UI branch for the merge.

New Learning:

Learned a practical Git branch-integration workflow how to reconcile diverging UI and logic branches while preserving each member's work through careful conflict resolution.

Accomplishment:

Successfully combined the jade UI branch with my development branch and created a dedicated integration branch to consolidate the front-end and back-end changes.

Challenges Faced & Response:

Overlapping edits between branches caused merge conflicts in shared view files.

Resolved them line by line, verifying that both UI and functionality remained intact.

Observations & Recommendations:

Frequent small merges are easier to manage than large end-of-week integrations.

Recommends agreeing on a shared branching convention early to reduce future conflicts.

TRAINEE'S SIGNATURE

Overview of the Company

City Hall of Biñan

The City Hall of Biñan in Laguna serves as the central administrative hub of the city, housing key government offices, service departments, and facilities that manage local governance, public welfare, and community development. It is located near historic landmarks such as the School of Dr. Jose P. Rizal Site and Museum, making it both a civic and cultural center.

Mission & Vision

Mission

City of Biñan's leadership is dedicated to fulfilling its responsibilities by (City Hall of Biñan, 2026):

- Promote social order and ensure public safety.
- Enhance economic prosperity through job generation, manpower and skills development, encourage and support local industries and its expansion.
- Guarantee social justice by way of ensuring basic services and equal opportunities.
- Deliver accessible and quality healthcare services.
- Protect and maximize the utilization of environment and natural resources towards the attainment of a disaster-resilient community.
- Ensure access to free and quality education to prepare our youth to be globally competitive.
- Support gender sensitivity, responsiveness and equality.
- Provide modern and needed infrastructure facilities.

- Preserve, conserve and nurture its cultural, historical and artistic heritage toward sustainable tourism.
- Increase collection efficiency through reasonable taxes, fees and charges, and ensure sound fiscal management.

Vision

According to City Hall of Biñan (2026), its vision is “A modern and developed City where its responsible people are proud of their cultural, historical and artistic heritage; enjoy peace and security, economic stability, social justice, preserved environment, accessible quality education, responsive social services, well-planned infrastructure facilities all anchored on good governance thus making the City of Biñan as the Premiere Heritage and Trade Capital of the South, the best place to live, work and visit.”

Host Evaluation Form

REVISION NO.: 00
REVISION DATE: May 13, 2016

STUDENT EVALUATION ON PRACTICUM HOST COMPANY AND TRAINING

IMPORTANT INFORMATION

- THIS FORM IS USED TO EVALUATE THE PERFORMANCE OF PRACTICUM HOST COMPANY BY THE STUDENT
- PRACTICUM ADVISER NOTES THE EVALUATION AND DISCUSSES RESULTS WITH THE STUDENT
- NOTED OJT PERFORMANCE EVALUATION REPORT FORMS PART OF THE PRACTICUM REPORT/ PORTFOLIO OF THE STUDENT

NAME OF HOST COMPANY	DEPARTMENT/SECTION/AREA ASSIGNED
City Government of Binan	ICTO
ADDRESS OF COMPANY	San Pablo ST, Binan, Laguna, Philippines

INSTRUCTIONS: Please indicate how much you agree with each statement with 1 being that you strongly disagree and 5 being that you strongly agree.

LEGEND: 5 – Strongly Agree 4 – Agree 3 – Neutral 2 – Disagree 1 – Strongly Disagree NA – Not applicable

PART I: EVALUATION ON PRACTICUM HOST COMPANY

STATEMENTS	RATING (please encircle one)					
1. I was given an orientation about the company rules, regulations, and enough explanation of my practicum assignment at the beginning of the training.	☐	☐	☐	☐	☐	☐
2. The employees I worked with served as resource persons, sharing ideas and materials.	☐	☐	☐	☐	☐	☐
3. The people I worked with were perceptive of my needs.	☐	☐	☐	☐	☐	☐
4. The practicum supervisor spent time observing my performance.	☐	☐	☐	☐	☐	☐
5. The practicum supervisor provided me with enough constructive criticism.	☐	☐	☐	☐	☐	☐
6. The practicum supervisor sufficiently answered my questions and clarifications.	☐	☐	☐	☐	☐	☐
7. The practicum supervisor was objective when critiquing my skills.	☐	☐	☐	☐	☐	☐
8. The demands placed upon me were realistic in this practicum experience.	☐	☐	☐	☐	☐	☐
9. I felt comfortable in my overall relationship with the people in the host company	☐	☐	☐	☐	☐	☐
10. The practicum supervisor was fair in her/his judgment of my skills.	☐	☐	☐	☐	☐	☐
11. I benefited from the supervision provided by the practicum supervisor.	☐	☐	☐	☐	☐	☐
12. I was given sufficient opportunities for the development of my skills and abilities	☐	☐	☐	☐	☐	☐
13. The practicum supervisor served a good professional model.	☐	☐	☐	☐	☐	☐
14. The company promotes a healthy working environment	☐	☐	☐	☐	☐	☐

ADDITIONAL COMMENTS (STRENGTHS AND AREAS TO IMPROVE)

PART II: EVALUATION ON PRACTICUM TRAINING

STATEMENTS	RATING (please encircle one)					
1. The training permitted me to generate the minimum number of direct contact hours required within a specified timeframe.	☒	4	3	2	1	NA
2. The training provided me with experiences that encouraged and developed my interpersonal skills.	☒	4	3	2	1	NA
3. The training provided me with experiences that encouraged and developed my technical skills.	☒	4	3	2	1	NA
4. The training provided me with experiences that encouraged and developed my analytical skills.	☒	4	3	2	1	NA
5. The training provided me with experiences that encouraged and developed my management skills.	☒	4	3	2	1	NA
6. The training provided me with experiences that encouraged and developed my customer relations skills.	☒	4	3	2	1	NA
7. Facilities and equipment are adequate and made available for the training	☒	4	3	2	1	NA
8. Overall, the establishment provided me with a good on-the-job training	☒	4	3	2	1	NA

FULL PRACTICUM REPORT

Discussion of the Nature of Tasks

During my practicum at the City Government of Biñan, I was assigned as a Web Systems Developer in the Information and Communications Technology Office (ICTO). My work centered on the Biñan Access Card (BAC) Management Information System, a web-based application whose end users are staff of the City Social Welfare and Development Office (CSWD). The system organizes resident and household records and manages sectors, services, programs, categories, QR access cards, distribution activities, user accounts, permissions, audit logs, and reports. I worked as part of a five-member development team and was the second most active contributor on the project's repository. I took ownership of several core modules from design through testing, while other members of the team handled the rest.

My main development work covered full-stack features across the system's records and administration modules. I built and refined the Family Profiling and Manage Records pages, where a user can search records by typing any part of a name or reference number. I added input filtering that stops special characters from breaking form submission or the SQL queries behind it, and I fixed civil status, suffix, and address fields that were returning empty. I also worked on the account management, role-based access, audit trail, and My Account modules.

My main deliverable was the bulk data pipeline for family records. I built the Excel import and export feature, a background cron worker that processes large imports without timing out, and an import reviewer that lets encoders check and correct imported rows before they are saved to the database. I was also responsible for the login and session guard, which enforces one active session per account, and for the lookups module, which I realigned to match the official CSWD family profiling form.

The import pipeline had to hold up against realistic volumes, so I ran stress tests with synthetic family datasets that scaled to 50,000 member records. These tests exposed gaps in the validator, which I catalogued into a prioritized fix list and then closed, tightening the checks against duplicate records, malformed rows, and unknown sector values. An earlier version of the reviewer crashed on imports of about 10,000 rows. I fixed it by staging the review rows to a file instead of loading them all into the database. I also ran regression testing and role-access testing after major changes, and in the final weeks I prepared user acceptance testing (UAT) materials so CSWD staff could check the system against their own workflows.

The team used Git branches so each feature could be developed and reviewed before it was merged into the main branch. A regular part of my work was merging teammates' branches into mine, resolving the conflicts that came from overlapping edits, and refactoring shared code: extracting reusable helper functions, removing dead code, and moving developer credentials out of the database and into environment variables. The development environment was a local stack of

XAMPP (Apache and MySQL), phpMyAdmin, and CodeIgniter 4. I regularly checked routes, database connections, environment settings, and localhost access, and I helped with basic workstation and software setup when the team needed it.

The practicum moved most of my work from coursework into a system with real users and real data volumes. The two parts I found hardest, handling large concurrent imports and resolving Git conflicts on a shared branch, are the ones I now understand in practice rather than in theory.

Software Used

Visual Studio Code: Used to review and edit PHP, model, configuration, and technical-documentation files.

XAMPP: Provided the local Apache and MySQL environment used to run and test the application.

PHP and CodeIgniter 4: Used for the server-side logic and Model-View-Controller structure of the system.

MySQL and phpMyAdmin: Used to review tables, relationships, records, descriptions, and SQL database updates.

HTML, CSS, and Bootstrap: Used for the structure, layout, forms, tables, modals, and responsive interface.

JavaScript, jQuery, and Ajax: Supported interactive controls and asynchronous page operations.

Git and GitHub: Used for version control, branch-based collaboration, and sharing approved updates.

Windows and web browsers: Used for local development, interface checking, and functional testing.

Hardware Used

The Biñan Access Card Management Information System is a web-based application and did not require specialized external hardware during development. The main hardware used consisted of my personal laptop and the available office computers and network equipment.

Personal laptop: Used for coding, database review, documentation, Git operations, and local system testing.

Office desktop computers: Used when checking the application in the workplace and assisting with workstation setup.

Keyboard, mouse, and display devices: Used for normal development, data entry, and interface checking.

Local network equipment and cables: Used or observed during basic connectivity and workstation-support tasks.

Software Development Outputs

Database and model review

I reviewed the database structure and model functions behind the family and member records, including how heads of household and members are related. Together with the team, I worked through merging the head of family and family member data into a single member table, using an `isHead` flag and a self-referencing `head_ID` field, and reviewed how this change affected model queries elsewhere in the system. I also reviewed the accounts schema, renaming the `role` field to `account_level` and removing the unused `is_official` logic after tracing every place it was referenced. On the sectors and services side, I reviewed the binary checkbox logic that maps each sector and service to its stored index, and worked through a renumbering of service IDs from a 0-based to a 1-based scheme across the schema and the application code that depended on it.

Reference-Data Updates

I reviewed and updated the sector, service, category, and program records to align them with the CSWD family profiling form, correcting mismatches between the system's internal labels and the terms used on the official document. I updated the naming conventions for sectors and services for consistency, then tested that the revised values were returned correctly by the model functions and displayed as expected on the Manage Records, Add Record, and lookups management pages. Where a lookup value needed to be retired rather than deleted, I implemented an archiving pattern that deactivates it for new entries while keeping it valid on existing historical records, so past family records stayed accurate.

Access, Logging, and System Checking

I reviewed account roles and access restrictions across the admin, encoder, and viewer levels, testing each level separately to confirm that a permission change for one role did not unintentionally expose or restrict functionality for another. I built a login and session guard that blocks an account from being logged in from more than one session at a time. I also worked on the audit trail, expanding it with narrative descriptions that record what each logged action actually means rather than just which field changed, and adding search and filtering to the audit log views. For system checking, I ran local functional and database testing through XAMPP, Apache, MySQL, and phpMyAdmin, and stress-tested the bulk import feature with synthetic datasets that scaled up to 50,000 family member records to surface validation gaps before real data was loaded. I documented each database revision, testing observation, and troubleshooting result, and coordinated branch updates with the team through Git so changes could be reviewed before merging into the main branch.

Scope of the Project

The Biñan Access Card Management Information System is a web-based resident-information and public-service management application developed for the City Government of Biñan. It supports the organized management of household records, resident classifications, services and programs, QR cards, aid-distribution records, reports, accounts, and audit information.

The project includes the following functional areas:

- Secure login and role-based access for authorized users.
- Dashboard summaries and recent-record presentation.
- Management, searching, filtering, creation, and Excel import of family and member records.
- Management of sectors, categories, services and programs, and aid types.
- Generation of printable QR cards by barangay or sector.
- Creation and monitoring of aid-distribution batches and distribution records.
- Reports for QR coverage, aid recipients, waiting families, kiosk performance, and barangay coverage.

- Management of user accounts, roles, status, profile information, and password changes.
- Audit trails for user actions, descriptions, browser information, and dates and times.

My contribution was concentrated on model and database-related work, record descriptions, validation, testing, documentation, and coordination of database and branch updates. The application was developed collaboratively, so the complete system features are presented while my assigned work is described accurately.

Screen of the Features

The following screens present the principal modules and user flows of the Biñan Access Card Management Information System. The screenshots were captured from the local development environment.

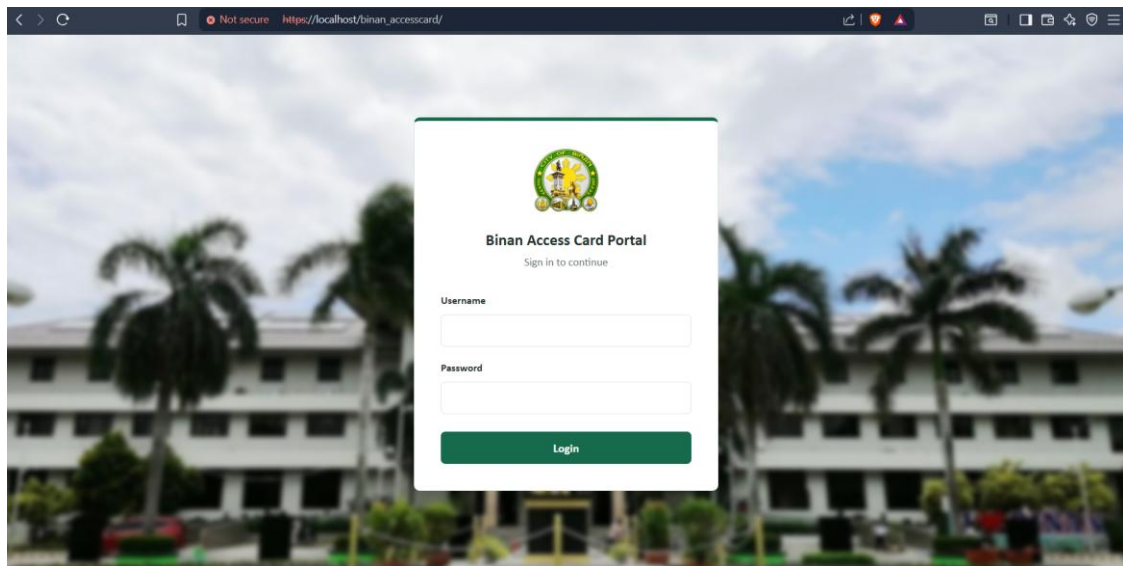

Figure 1. Login and Authentication. The Biñan Access Card Portal authenticates registered users before allowing them to access the system. The page uses username and password fields and displays the official city branding.

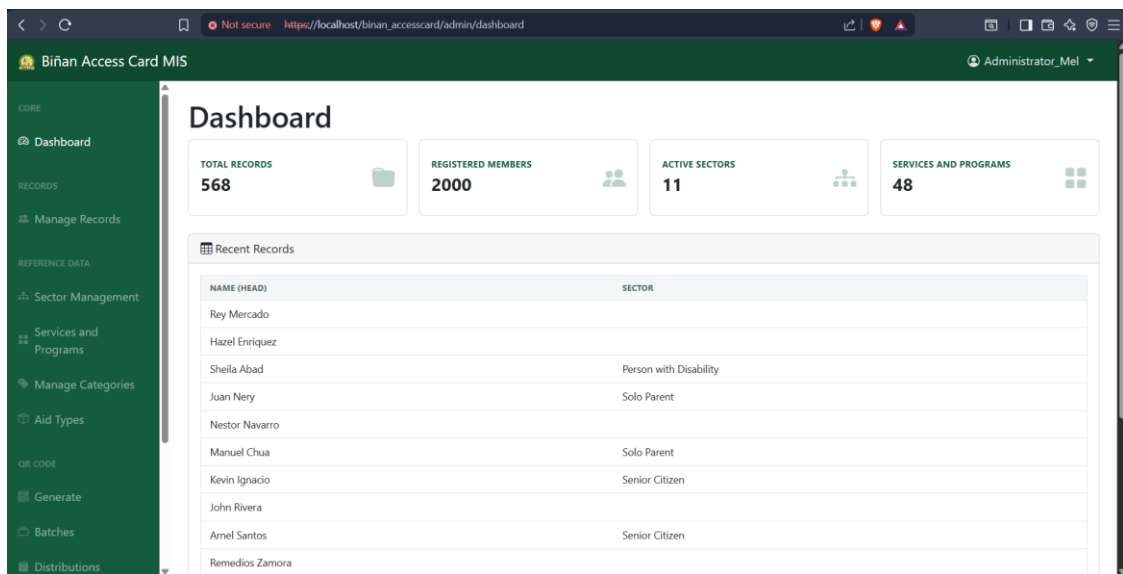

Figure 2. Administrator Dashboard. The dashboard presents summarized counts for records, registered members, active sectors, and services and programs, together with a list of recent records.

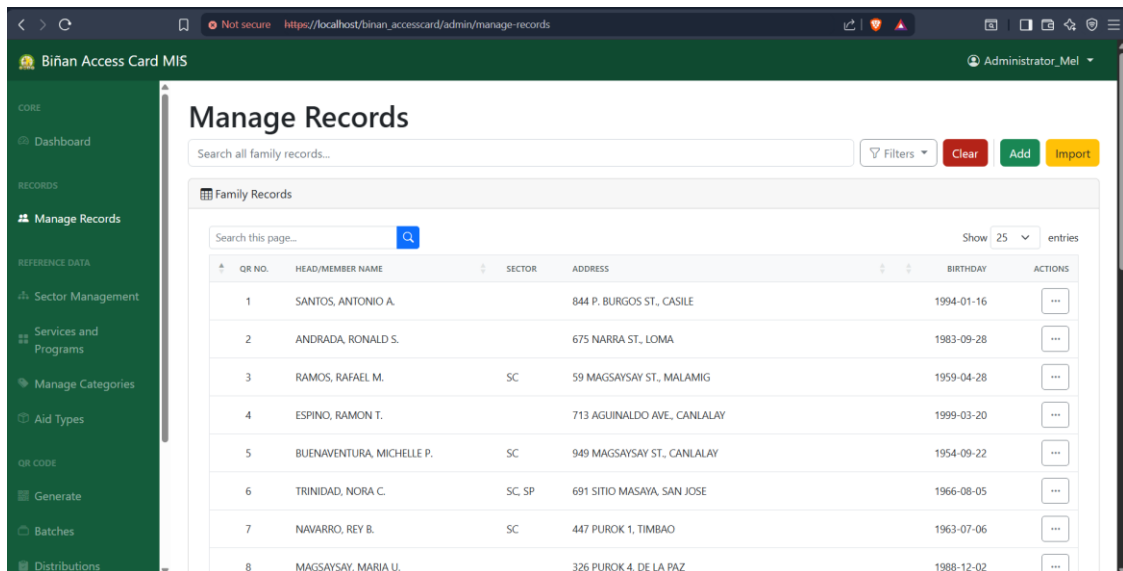

Figure 3. Manage Records. The Manage Records page lists family records and provides searching, filtering, record creation, importing, entry-count selection, and row-level actions.

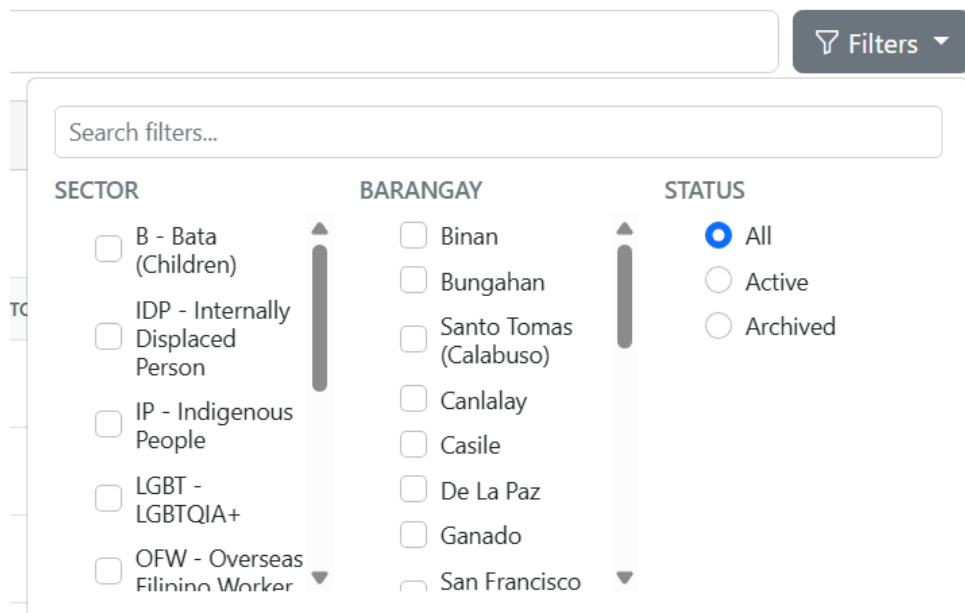

Figure 4. Record Filters. The filter panel narrows family records according to sector, barangay, and status. A search field is also provided for locating filter choices.

Figure 5. New Family Record. The New Family Record form gathers the head of family's personal information, address, sector, eligible services and programs, QR number, and related household members.

Figure 6. Excel Import. The Excel import feature supports bulk record entry using a downloadable template. The instructions identify the head of family and connect members through a common family number.

Sector Management

Discussion

Working on the Biñan Access Card Management Information System showed me that a bulk data feature is only as reliable as its weakest validation check. The Excel import and export feature I built for family records looked complete once it accepted a well-formed file, but stress testing it with synthetic datasets scaling up to 50,000 member records exposed problems that a small sample file never would have: cross-batch QR duplicates, a validation scope bug that only checked the head of household and skipped members, and silent float misfiling in numeric fields. An earlier version of the import also crashed on files of about 10,000 rows because it tried to hold every review row in memory at once. I fixed this by staging the rows to a file and adding a background cron worker to process the import asynchronously, so large files no longer time out the request. Building the import reviewer on top of that, so an encoder can inspect and correct staged rows before they reach the database, taught me that a bulk feature needs a review step built in from the start rather than added after data has already gone in wrong.

The login and session guard I built, which blocks an account from being logged in from more than one session at a time, came with its own lesson in balancing security against usability. Detecting an existing session without locking out a legitimate re-login took a few iterations, and the fix came from tracking session state so a stale session could be safely replaced rather than blocking the new login outright. The lookups module taught a related lesson from a different angle. Realigning the system's sectors, services, and categories to match the CSWD family profiling form meant treating the official paper form as the source of truth rather than the system's existing labels, and archiving outdated lookup values instead of deleting them so historical family records stayed accurate.

The practicum also built my collaboration and troubleshooting skills. Working through a five-member team on a shared repository meant regularly merging branches into my own and resolving conflicts from overlapping edits, particularly when integrating UI work from a teammate's branch with my own refactored models. Local development issues involving XAMPP, MySQL, environment configuration, and Git branch management required systematic checking rather than guesswork, and documenting each fix made it easier to retrace what changed and why.
